Abstract

Building a community of shared future is conducive to building a new type of partnership of connectivity, connectivity and mutual trust among countries, and to promoting the growth of world forces of justice. This is to contribute Chinese wisdom, Chinese solutions and Chinese strength to building a peaceful, peaceful and prosperous new world. The outbreak and spread of 2019-nCoV disease has brought new challenges and threats to the development of human society. The 2019-nCoV disease situation makes the humanity faces more uncertainty and the difficult problem. Since the outbreak of the epidemic, China has always adhered to the concept of a community of shared future for mankind. While effectively preventing and controlling the epidemic in China, China has also provided assistance to other countries within its capacity, thus setting an example for the international community.

Keywords

China; 2019-nCoV; The Community of Human Destiny.

1. The Community of Human Destiny in the Era of 2019-nCoV

President Xi Jinping has proposed the concept of a community of shared future for mankind. This puts forward the Chinese plan for the further development of human society. The Community of human destiny is put forward under the background of the increasingly perfect scale of globalization. The outbreak of the 2019-nCoV shows that the community of human destiny is right. Viruses have no borders. The epidemic doesn't choose nationality. Only if all of humanity works together can the number of infections and deaths be minimized. History will eventually prove that only by firmly establishing the community of human destiny can mankind seek deeper development and make greater breakthroughs in development. The epidemic of 2019-nCoV had a severe impact on the global economy, which plunged the global economy into recession. The 2019-nCoV outbreak has led to border closures and restrictions on the movement of people around the world, shrinking global demand and disrupting supply chains. This triggered a liquidity crisis. No single country can contain 2019-nCoV outbreak on its own[1].

The entity content of human community is production community, information community and action community, etc. .To effectively control the epidemic and defuse the risk of global economic recession, it is necessary for all countries in the world to adhere to the principle of "Building a community of shared future for mankind", step up information communication, share experience and work together to stabilize the global supply chain, industrial chain and innovation chain. So that we can work together to deal with the global economic crisis triggered by the public health crisis. A series of measures taken by China to strictly prevent and control the epidemic, stabilize the economic order and strengthen international cooperation have provided the international community with a set of effective plans. China's victory in the fight

against the epidemic has guaranteed the common production, common information and common action of mankind[2].

The goal of the Community of human destiny is to seek the well-being and common development of all mankind. It is a system that can be applied to all people. The Community of human destiny has been recognized and accepted by more and more countries. The epidemic of 2019-nCoV has taken millions of lives and caused serious losses to the world economy, even directly threatened the basic security of human existence. It is an inexorable trend of the historical development of human society to construct a community of human destiny. The Community of human destiny is an important concept of China and the ideological outcome of the publicity that China provides to the world. The concept of community of human destiny has shown great moral value in the new situation of 2019-nCoV epidemic situation.

2. China's Concept of a Community of Shared Future for Mankind

President Xi Jinping said, our party united and led the people of all ethnic groups across the country in a breathtaking battle against the epidemic. China has gone through an arduous historical examination and made great efforts to achieve major strategic results in the fight against the new pneumonia. This has created another heroic feat in the history of mankind's struggle against disease. In the face of a sudden serious re-crown epidemic, the majority of doctors sacrifice their lives to save lives. Millions of Chinese doctors are at the forefront of the fight against the 2019-nCoV. Chinese doctors have brought light to a long night of viral devastation[3].

The 2019-nCoV pneumonia epidemic reminds us that mankind is a community of shared destiny. No country is immune from a major crisis. Unity is the way of the world. History and reality tell us that the people of all countries in the world will be able to work together to address various global issues and build a better planet. China's cooperation with the world has contributed wisdom and strength to the global fight against the 2019-nCoV disease. China has actively fulfilled its international obligations. China was the first country to report the outbreak to the World Health Organization. China is the first to release the new coronavirus gene sequence and other information. China is the first to announce a treatment plan. China unreservedly shares its experience in the prevention and control of 2019-nCoV diseases. China calls for joint efforts to build a community of human health. China has put forward a series of proposals on international assistance and the use of vaccines. China's actions have helped save thousands of lives around the world[4].

China implements the concept of a community of shared future for mankind. We will support the international community in jointly addressing the increasingly severe global challenges. China will continue to promote international cooperation in epidemic prevention and control. China supports the World Health Organization in playing a leading role in the global fight against the epidemic and sharing its experience in prevention, control and treatment with other countries. China continues to provide assistance to countries and regions with weak capacity to respond to the epidemic. China plays the role of the world's largest supplier of anti-epidemic materials and promotes the building of a community of human health[5].

3. China and Kazakhstan Cooperate to Fight 2019-nCoV Disease

Mutual support between China and Kazakhstan reflects the high level and particularity of bilateral relations. This has set an example for the international community to cooperate in the fight against the 2019-nCoV disease. A team of Chinese medical experts has arrived in the big cities of Nursultan, Karaganda and Almaty. Experts from China and Kazakhstan shared China's experience in the prevention and control of 2019-nCoV disease and the detection, isolation and treatment of suspected cases. China has put forward relevant proposals for disinfection of

public places and strengthening management of community isolation in Kazakhstan. The cooperation in the fight against the 2019-nCoV epidemic vividly reflects the strong will of the two peoples to join hands in tackling global risks. This is a clear example of good-neighbourliness and a permanent comprehensive strategic partnership. The assistance given by the Chinese medical team has aroused unprecedented positive repercussions in Kazakh society. The two countries also donated large quantities of anti-epidemic materials to each other, which became a good story of friendship.

CNPC and Kazakhstan's state oil and Gas Company have jointly donated 100 oxygen generators to the city of Chimkent and the Almaty Region. The two companies donated 4 billion Tenge to the HALYK charitable foundation of Kazakhstan to fight the epidemic. The money will be used to buy MRI scanners, computed tomography, x ray machines, ultrasound and endoscopic diagnostic equipment, as well as ventilators to diagnose and treat new coronavirus infections. The assistance from CNPC will be used by medical institutions in Almaty and other cities. The president of the HALYK charitable foundation of Kazakhstan said the new crown outbreak was not only a medical emergency but also a real challenge to the international community. The importance of solidarity at this time is more pronounced than ever before. The Fund thanked CNPC for its support in combating the epidemic and believed it would be of great help to the country and people of Kazakhstan. The donation was covered by several mainstream media outlets in Kazakhstan. The people of Kazakhstan highly appreciate the contribution made by CNPC to the economic and social development of Kazakhstan.

Kazakhstan President Tokayev spoke highly of China's fight against the 2019-nCoV disease, reiterating that Kazakhstan will work with China to combat the disease. President Tokayev of Kazakhstan stressed that, "At this difficult time, the Kazakhstan supports the efforts and decisive actions of the leadership of the People's Republic of China. President Xi Jinping himself has said that this is a major test that the Chinese people have undergone in recent years. I believe that We will fight against the difficulties hand in hand. We will continue to forge ahead on the road of developing and strengthening our strategic partnership."

4. The Spirit of the Collectivism in the Film "The Chinese Doctor"

The film "The Chinese doctor" takes audiences back to the hard times of fighting the 2019-nCoV epidemic. "The Chinese doctor" came out just in time. The precious history of the fight against the 2019-nCoV disease is recorded and depicted in this film. The names of Chinese doctors are remembered. The film uses images to retain the collective memory of the Chinese people. Thanks to the bravery, selflessness, and dedication of countless Chinese doctors, we have been able to return to our old ways of life in such a short time. Everyone is a witness to the success of China's fight against 2019-nCoV. The film "The Chinese doctor" does not have a grand narrative, but the camera is aimed at a living person. Instead of indulging in shouting slogans, the film uses ordinary people's honest reactions to difficulties and frustrations. This is all the more a reflection of the great spirit of Chinese doctors. The more calm and restrained the film is, the more it can be narrated in a down-to-earth manner, the more it can approach the audience's heart. That's what's so great about this movie.

The spirit of collectivism and altruism is inscribed in traditional Chinese culture. The film's rarest feature is a tribute to the heart-wrenching exploits of Chinese doctors. Chinese doctors are not omnipotent, and there are human emotions, but they have always been at the forefront of the fight against the epidemic. Chinese doctors are ordinary, but great and more valuable. Chinese doctors are not the omnipotent heroes of Hollywood blockbusters, but they are worthy of our eternal dependence. The film shows the scars that the 2019-nCoV Disease has left in people's hearts. Movie Star Zhang Zifeng plays the little girl to say the line, "Uncle, you tell me that how can I live without my parents?" And the line moved the audience. This experience will

become the most valuable asset of the Chinese people. The street outside the cinema is a scene of ordinary life. Everything is what a good life looks like. How hard it is to live a normal life like this. Those of you who have lived through that time will understand, and salute all the Chinese doctors[6].

5. Conclusion

The history of human civilization is also a history of struggle against disease and disaster. The epidemic of 2019-nCoV disease is a global challenge facing mankind. The 2019-nCoV epidemic is a major non-traditional security threat. Global Cooperation to combat the epidemic is a realistic requirement to safeguard human interests. The 2019-nCoV epidemic continues to spread across the globe. This reflects the urgency of building a community of human health. As an initiator of building a community of shared future for mankind, China has actively shared its experience in the fight against the pandemic. This era needs China to play the role of global anti-epidemic, contribute science and technology anti-epidemic Chinese wisdom, and tell the Chinese story of the fight against the epidemic.

Acknowledgments

Supported by the research on the concept and practice of the Community of human destiny under the normal control of epidemic situation (project number: 2021YY213), which is 2021 general project of philosophy and social science programming of Shanxi Province, conducted by Dr. Li Ning.
